# ABOUT US

## **Aaliwash Brand**

The Aaliwash brand is established as a pioneer in the production and supply of industrial cleaning products, with the goal of offering high-quality, eco-friendly products. With over a decade of experience in the industrial and sanitary cleaning industry, the company strives to meet the diverse needs of various industries by utilizing modern knowledge, advanced technologies, and a team of experienced specialists.

Aaliwash products include a wide range of specialized cleaners such as industrial detergents, disinfectants, degreasers, and powerful cleaners designed for use in automotive, food, pharmaceutical, hospitality, healthcare, and other industrial sectors. These products are produced according to international standards and are continuously improved and developed to meet the ever-increasing market demands.

Our mission at Aaliwash is to meet customer needs by providing safe, effective, and sustainable products that deliver high performance in industrial cleaning and washing while minimizing environmental impact.

## Industrial Degreasers

These products are used to remove oils, greases, and industrial fats from metal, plastic, and other surfaces. They are used in industries such as automotive, parts manufacturing, oil and gas, and heavy machinery. Industrial degreasers are divided into two types:

- **Water-Based Degreasers:** Used for safer and more environmentally friendly cleaning.
- **Solvent-Based Degreasers:** Designed for faster and more effective cleaning of industrial greases and stubborn residues.

They are used in various settings including restaurants, industrial kitchens, leather industries, textile industries, and laundry.

## Alkaline Cleaners

These cleaners are formulated with alkaline compounds and are used for removing residues, stubborn fats, and proteins. Industries such as food processing, dairy, pharmaceuticals, and industrial kitchens use these products for cleaning surfaces, tanks, machines, and equipment.

## . Acidic Cleaners

Acidic cleaning products are used to remove mineral deposits, rust, and lime from surfaces. These products are commonly used in steel production, water treatment industries, and heating and cooling equipment. Acidic cleaners are highly effective in removing limescale and metal oxides from pipes and equipment.

## Disinfectants

Disinfectants are used for cleaning and sterilizing surfaces and equipment in industries such as healthcare, food processing, and pharmaceuticals. These cleaners not only clean but also kill microbes, bacteria, and viruses, creating a hygienic and safe environment.

## **CIP Cleaners**

Cleaning In Place (CIP) systems are designed for cleaning industrial equipment without disassembly. CIP-specific cleaners are used in the food and beverage industry, dairy, pharmaceuticals, and chemical production for cleaning and disinfecting production lines and tanks. These cleaners are available in alkaline, acidic, and disinfectant formulations.

## Sensitive Surface Cleaners

Specialized cleaners are produced for cleaning sensitive surfaces such as electronic components, plastic materials, and surfaces requiring precise cleaning. These products usually do not contain strong solvents or corrosive compounds and are designed to clean without damaging the surface.

## Multi-Purpose Cleaners

These cleaners are designed for general use and for cleaning various surfaces, floors, walls, and equipment. They are used in industrial environments, hospitality, restaurants, and commercial spaces for quick and effective cleaning and are typically formulated with alkaline or neutral compounds.

## Automotive Industry Cleaners

These cleaners are designed for cleaning vehicles, engine parts, and related equipment. They provide high cleaning power without damaging sensitive vehicle surfaces and are produced for body, rim, and engine cleaning.

## Foaming Cleaners

These products are designed for use in foam machines and for cleaning large industrial surfaces, workshops, warehouses, and parking areas. The foam produced by these cleaners helps achieve deep and effective cleaning of surfaces, improving the efficiency of the cleaning process.

## Neutral Cleaners

Neutral cleaners are used for cleaning surfaces that do not require strong alkaline or acidic agents. They are suitable for removing light to moderate contamination and maintaining surface integrity in sensitive environments such as food processing and healthcare industries.

## Textile Industry Cleaners

In the textile industry, specific cleaners are used to remove fats, chemicals, and dyes from fabrics and fibers. These products must be highly effective in preserving fabric and fiber quality while not damaging textile machinery.

## Industrial Car Wash Cleaners

These cleaners are specifically designed for cleaning and shining the exterior surfaces of vehicles, trucks, and heavy machinery. Some of these cleaners include wax and polishing compounds to provide a shiny appearance in addition to cleaning.

Each of the industrial detergents are designed based on the specific needs of different industries and play an important role in improving washing processes and increasing productivity. Choosing the right detergent can help to increase the life of the equipment and reduce the maintenance costs, and at the same time, while maintaining the quality of the products, it also helps to reduce the environmental impact.
